tsconfig.json	Initailize the project	3 months ago

README

Getting Started

First, Start development:

1. Clone the repository

```
git clone https://github.com/onesamket/forum.git
```

2. Install dependencies

```
cd forum && npm install
```

3. Run the application in development mode

```
npm run dev
```

```
# or
```

```
yarn dev
```

```
# or
```

```
pnpm dev
```

```
# or
```

```
bun dev
```

4. Run the application in production mode (optional)

```
npm build
```

App features

- Secure authentication
- WYSIWYG editor for the posts
- Mobile first
- AI integrated
- Real time update using socket.io
- User preference and recommendation
- Channel and group management
- Follow and subscribe features
- Emailing service
- Share, bookmark, like and comment ...

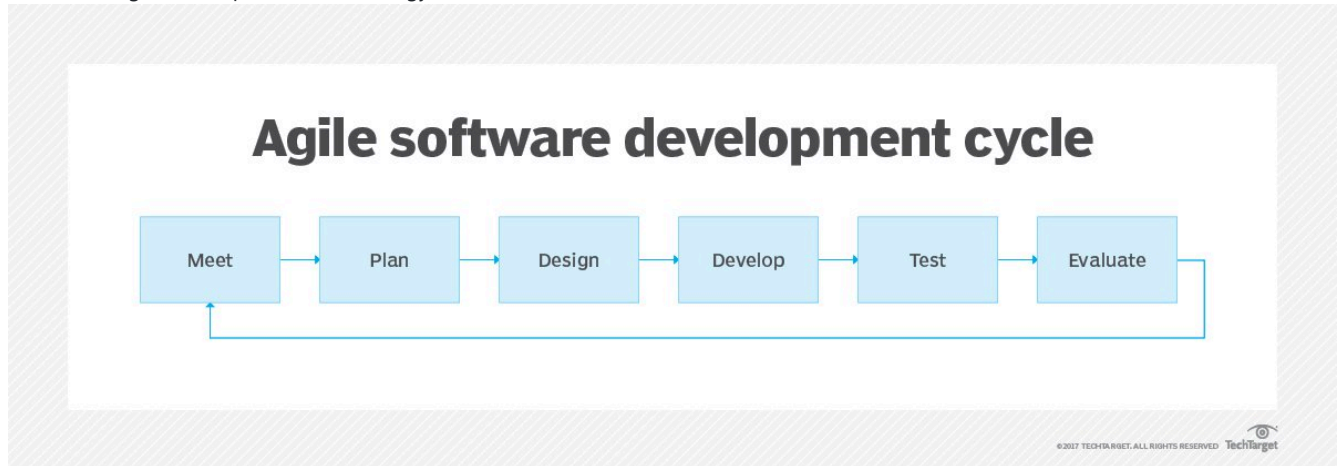

Tools we will use

- Nextjs
- Tailwindcss
- Zustand global state management
- Next-auth
- Supabase for file storage
- express and socket.io for real time functionality
- Nodemailer for sending mail messages
- Google and Github for auth providers
- Prisma for ORM (object relational mapping)
- Postgres database or MongoDB for database
- Figma for graphics design

- Draw.io for drawing for diagramming
- we will decide as we working on the project

Steps or methods of development

- we will use agile development methodology

You Idea goes here?

Packages and Libraries

```
lient@latest @supabase/supabase-js @google/generative-ai @react-email/render nodemailer react-email @react-email/components -E
```

Initialize Prisma

```
npx prisma init
```
